

Professional Summary

Technical Consultant/Platform Engineer with hands-on experience supporting mission-critical applications across cloud and on-premises environments, with strong expertise in enterprise Linux, infrastructure operations, and production support. Skilled in system administration, troubleshooting, incident response, patching, vulnerability remediation, automation, and infrastructure management using RHEL, Ubuntu, Ansible, Terraform, and shell scripting. Experienced in developing solution designs and user manuals, leading technical troubleshooting and incident calls, and collaborating with cross-functional teams to resolve complex issues and maintain secure, stable, and highly available application environments.

Certifications

- Certified Kubernetes Administrator (CKA)
- CompTIA Security + Certified
- AWS Certified Solutions Architect – Professional
- AWS Certified Sys-Ops Administrator – Associate
- Linux Essentials Professional Certificate (LPIC-1)

Technical Skills

Operating Systems & Linux Administration

- Red Hat Enterprise Linux (RHEL), Rocky Linux, Ubuntu, Amazon Linux, Windows, macOS
- Linux system administration, server maintenance, patch management, vulnerability remediation, system hardening, user access management

Infrastructure & Automation

- Shell Scripting (Bash), Python, Ansible, Terraform, Infrastructure as Code (IaC), GitHub Actions
- Automated server configuration, patch deployment, and infrastructure provisioning

Cloud & Virtualization

- AWS, Microsoft Azure, Google Cloud Platform (GCP), VMware
- EC2, IAM, Route 53, S3, Virtual Machines, Storage Accounts, Networking Components

Monitoring & Operational Support

- System monitoring, incident management, production support, troubleshooting, operational support
- Prometheus, Grafana, CloudWatch, ServiceNow, Zendesk, Jira

Networking & Security

- TCP/IP, DNS, Load Balancing, Firewalls, VPC Concepts
- Security scanning, compliance-aware operations, vulnerability remediation, IAM

Containers & Platforms

- Docker, Kubernetes, ECS, EKS, AKS, GKE
- Posit Workbench, Posit Connect, Posit Package Manager, SAP, Oracle, Snowflake, Databricks

Professional Experience

Consultant/Platform Engineer July 2026 – present **Katalyze Data** – Contract via Purenest360 LLC
Remote, UK

- As a Consultant at Katalyze Data (formerly Amadeus Software), I write solution design documents, deploy, and support secure, scalable Posit Team (Workbench, Connect & Package Manager) environments across Microsoft Azure and AWS. I develop solution architectures, security models, technical documentation, and user manuals, while provisioning and configuring cloud infrastructure and deploying Posit applications to meet customer requirements. I work directly with customers to provide technical guidance, Linux and cloud platform support, troubleshooting, and training throughout the deployment and platform lifecycle.

Consultant/Platform Engineer January 2026 – present **Purenest360 LLC** – Freelance, Virginia, US

- Design, provision, and support secure, scalable cloud and Linux platforms across Microsoft Azure and AWS using Terraform, managing VMs, storage, VPCs/VNets, DNS, IAM, and security controls. Work directly with clients to gather requirements, deliver and troubleshoot infrastructure and applications, provide Linux and cloud training, create technical documentation, and deliver secure, reliable platform solutions aligned with business needs.

Technical Support Engineer July 2022 – January 2026 **Posit PBC** – Remote Boston, MA, US

- Provisioned and deployed Red Hat Enterprise Linux (RHEL) servers using standardized build procedures and Infrastructure as Code (Terraform), ensuring consistent, secure, and repeatable enterprise deployments.
- Supported Posit Applications including Workbench, Connect and Package Manager.
- Developed and maintained Ansible playbooks and roles to automate Linux server configuration, software deployment, system hardening, and configuration drift remediation across enterprise environments.
- Managed enterprise Linux patching and software lifecycle activities, coordinating maintenance windows, performing kernel updates, vulnerability remediation, package management, and post-patch validation to maintain high system availability and security compliance.
- Administered and supported Linux-based application environments in AWS, Azure, and GCP infrastructures.
- Provisioned and managed cloud infrastructure resources including virtual machines, storage buckets among others.
- Implemented GitHub Actions CI/CD workflows to automate diagnostics, validation, deployment, and operational tasks.
- Performed troubleshooting, system analysis, and incident resolution for enterprise customer environments.
- Collaborated with engineering and security teams to improve platform stability, observability, and operational efficiency.
- Served as a senior Linux engineer supporting production infrastructure by leading troubleshooting efforts, performing root cause analysis, mentoring junior engineers, collaborating with application and security teams, and driving automation initiatives that improved operational efficiency and platform reliability.

Software Systems Engineer October 2019 – July 2022 **Dominion Energy** – Virginia, US

- Administered enterprise Linux systems including Red Hat Enterprise Linux (RHEL), Rocky Linux, and Ubuntu servers supporting critical business operations.
- Led Linux server patch management activities including system updates, vulnerability remediation, and maintenance scheduling across enterprise environments.
- Performed Linux system administration tasks including user account management, permissions management, system configuration, and operational support.
- Automated server configuration, patching, and maintenance processes using Ansible playbooks and shell scripting.
- Monitored Linux server health, system performance, and operational stability while troubleshooting infrastructure and application issues.
- Supported physical and virtual server environments with a focus on system reliability, security, and production support.
- Participated in incident response activities, live troubleshooting sessions, root cause analysis, and on-call operational support rotations.
- Collaborated with network, security, database, and application teams to resolve infrastructure incidents and improve operational efficiency.
- Leveraged Python alongside Bash, Ansible, and Linux utilities to automate infrastructure workflows, generate operational reports, and support troubleshooting of production systems.
- Assisted with infrastructure maintenance, change management activities, and server lifecycle support in enterprise environments.

Manager/Systems Administrator July 2015 – October 2019 **National Vision Inc** – Virginia, US

- Managed store inventory, mentored team members and promoted operational best practices while collaborating with cross-functional teams to resolve technical incidents and improve service efficiency.
- Collaborated with internal teams to resolve technical incidents and improve operational efficiency.

Education

Bachelor of Science in Computer

Makerere University
